

Geometric Patterns

Geometric patterns consist of a series of shapes. Patterns made from shapes are similar to patterns made from numbers because the pattern is determined by a rule. Figure out the rule, and you can continue the pattern!

Key vocabulary

pattern

A repeating arrangement of colors, shapes, or figures.

Number Patterns

Number patterns are sort of like riddles, but with numbers instead of words. Learn how to solve them by discovering their secret rules.

Similar Figures

Look carefully! How can you tell if two figures are exactly the same or just similar? We have the strategies that work.

Edges, Faces, Vertices

Can you count the edges, faces, and vertices on your desk? After you check out this section, it will be no problem!

Congruent Figures

What do you call two figures when they are the same size and shape? No, not identical twins. They are called congruent!
