

Geometry – Periods 1, 5 & 6 – Dr. Sargent – Assignments for Apr 27 to the end of the school year

Regular Assignments

- 1) You will have your regular assigned 12 topics of ALEKS each week.
- 2) We will be doing review of everything we have learned so far. There will be a Quiz available each week which will take you through each chapter of Geometry we have covered to date. Each Quiz will be available from Monday through the following Sunday evening. You may take each one a maximum of 3 times, and I will record your best score. You may use one take as a review, and then the other two takes as the real thing, if you like. Together, these quizzes will constitute your final exam in this course.

If you are doing these assignments with pencil and paper, I will attach the first couple to this written assignment sheet. I will attach two copies of each quiz – the first will include the answers and will be for practice and review; the second will be for a grade. You should return these in two weeks at which time you can pick up the remainder of your quizzes. These will need to be returned before the end of the grading period.

Please contact me if you have any questions, and please stay safe and healthy!
